Hi Jong Ho,

Bugbot, Security, and PR Routing & Approval agents are now available in the Automations page in web and desktop.

Configure custom automations and Cursor's built-in agents to build your own self-driving codebase.

The screenshot shows the 'Automations' page in the Cursor web interface. The left sidebar contains navigation links: 'New Chat', 'Automations' (selected), 'Dashboard', and 'Agents'. Below 'Agents' is a message 'No Agents Yet'. The main content area is titled 'Automations' and includes a subtitle 'Automate repetitive tasks with always-on agents and configure Cursor's built-in agents for your team.' A 'New Automation' button is in the top right. Below the title, there's a section 'From Cursor' with a preview of the automation interface. To the right, a box titled 'Ship better code, faster' lists three built-in agents: 'Review Code with Bugbot' (Catch bugs and auto-fix before they ship), 'Scan and Triage Security Vulnerabilities' (Security checks on every change), and 'Route PR Reviews and Auto-Approve' (Assign reviewers and approve PRs). A 'Get Started' button is at the bottom of this box. Below the automation preview, there's a table showing a list of automations. The table has columns: Name, Author, Created, Status, and Tools. The automations listed are 'Fix bugs reported in Slack', 'Generate docs', and 'Add test coverage', all created by 'Aaditya Jain' and marked as 'Active'.

Name	Author	Created	Status	Tools
Fix bugs reported in Slack	Aaditya Jain	now	✓ Active	...
Generate docs	Aaditya Jain	9d	✓ Active	...
Add test coverage	Aaditya Jain	9d	✓ Active	...
